Role:

Backend + PPT
Frontend + Report
Backend + PPT
Backend + Hosting
Frontend + Report

Problem Statement

Many people struggle to manage their personal finances because they do not track their daily income and expenses properly. This results in overspending and poor savings management. Hence, there is a need for simple and efficient budgeting system.

Problems faced by people:

- lack of proper tracking of daily income and expenses
- overspending due to poor budget planning
- no clear record of monthly savings
- difficulty in categorizing expenses (food, travel, bills, etc.)
- manual calculations leading to errors
- no visual analysis of spending patterns
- poor financial discipline and planning
- difficulty in setting and achieving savings goals

Solution – Budget Planner

Core Functionalities:

- Real-Time Tracking -> Effortlessly log both income and daily expenses as they occur for an up-to-date balance.
- Smart Categorization -> Automatically group spending into categories like Food, Transport, and Utilities to see exactly where money goes.
- Comprehensive Summaries -> Generate monthly reports to visualize total inflow versus outflow at a glance.

User Benefits & Impact:

- Financial Discipline -> Encourages mindful spending habits specifically tailored for students and busy individuals.
- Goal-Oriented Planning -> Provides the visibility needed to set and reach specific financial saving targets.
- User-Centric Design -> A simplified platform that removes the stress of manual financial management.

Comparison

S.No.	Features	Existing Apps	Budget Planner
1.	User Interface	Complex and cluttered ❌	Simple and intuitive ✅
2.	Cost	Often includes paid features ❌	Completely free to use ✅
3.	Ads	Frequently contains too many ads ❌	Clean, ad-free design ✅

Tools & Technologies Used

Development Stack:

- **Frontend** - Built using HTML5, Custom CSS, Bootstrap 5, EJS (Embedded JavaScript templating), Chart.js for a responsive and modern user interface.
- **Backend** - Powered by Node.js, Express.js to handle application logic, routing, and API requests.
- **Database** - Utilizes Local Storage or MongoDB for efficient data persistence and storage.
- **Version Control** - Managed via GitHub for tracking changes and collaborative development.
- **Online Hosting** – Deployed using AWS to ensure high availability, scalability, and secure management of the application environment.

Project Timeline

Phase 1: Planning & Analysis

- Requirement Analysis - Defining core features and user needs.
- System Architecture - Planning the React and Python Flask integration.

Phase 2: UI/UX Design

- Wireframing - Designing the dashboard and transaction layouts.
- Visual Styling - Creating a clean, minimalist interface for ease of use.

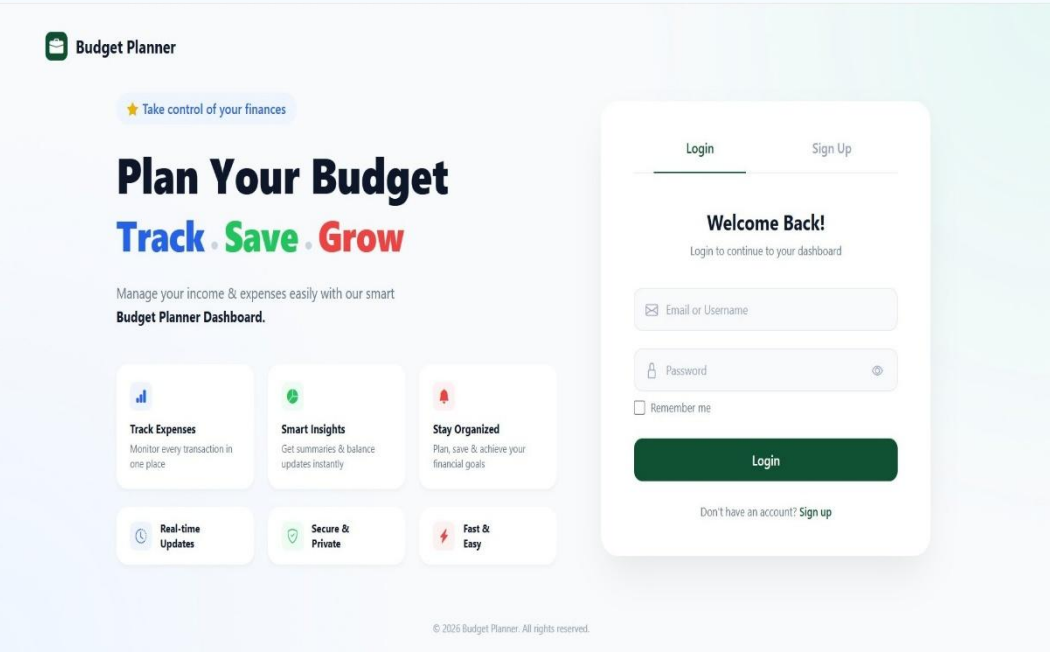

Phase 3: Core Development

- Frontend & Backend - Building React components and Flask API routes.
- Feature Logic - Implementing expense categorization and savings math.

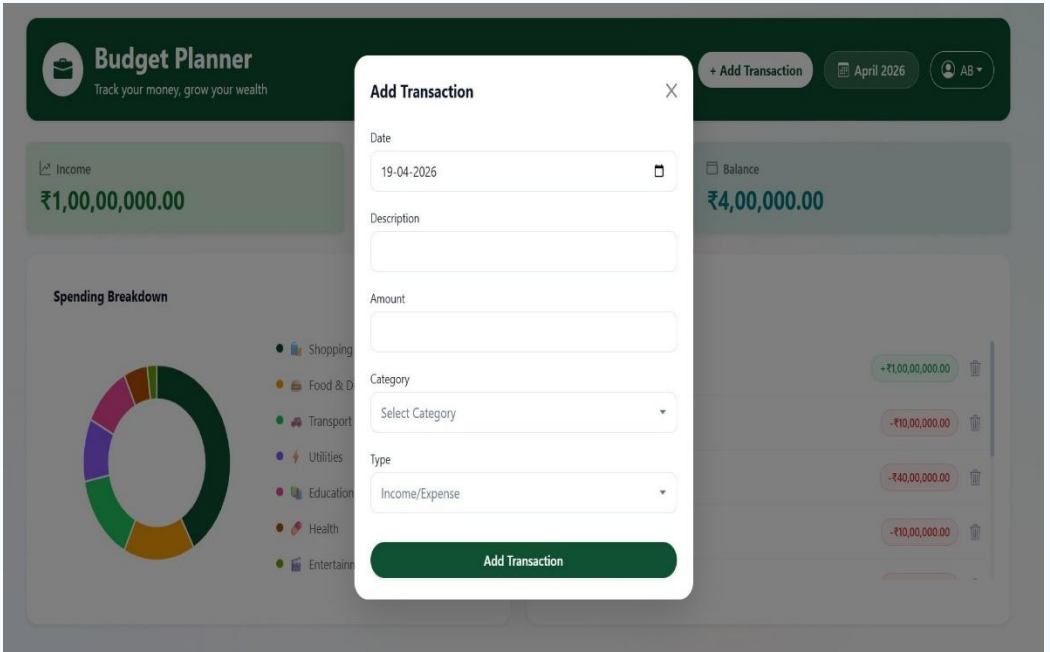

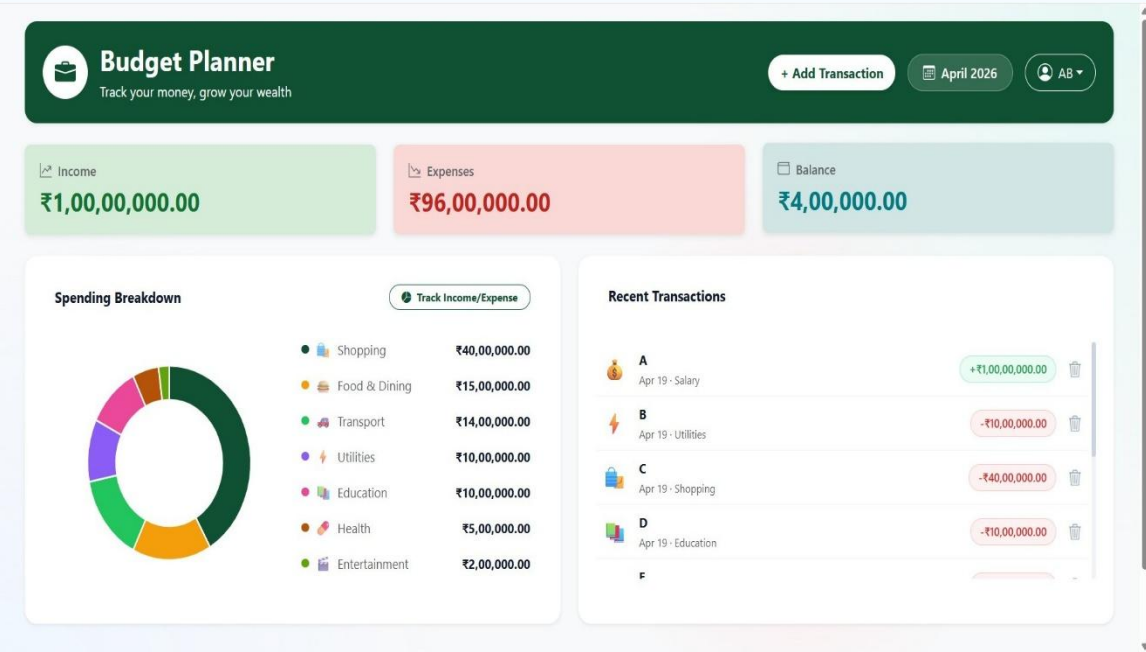

Phase 4: Testing & Finalization

- System Testing - Debugging and verifying calculation accuracy.
- Deployment - Finalizing the application for the project submission.

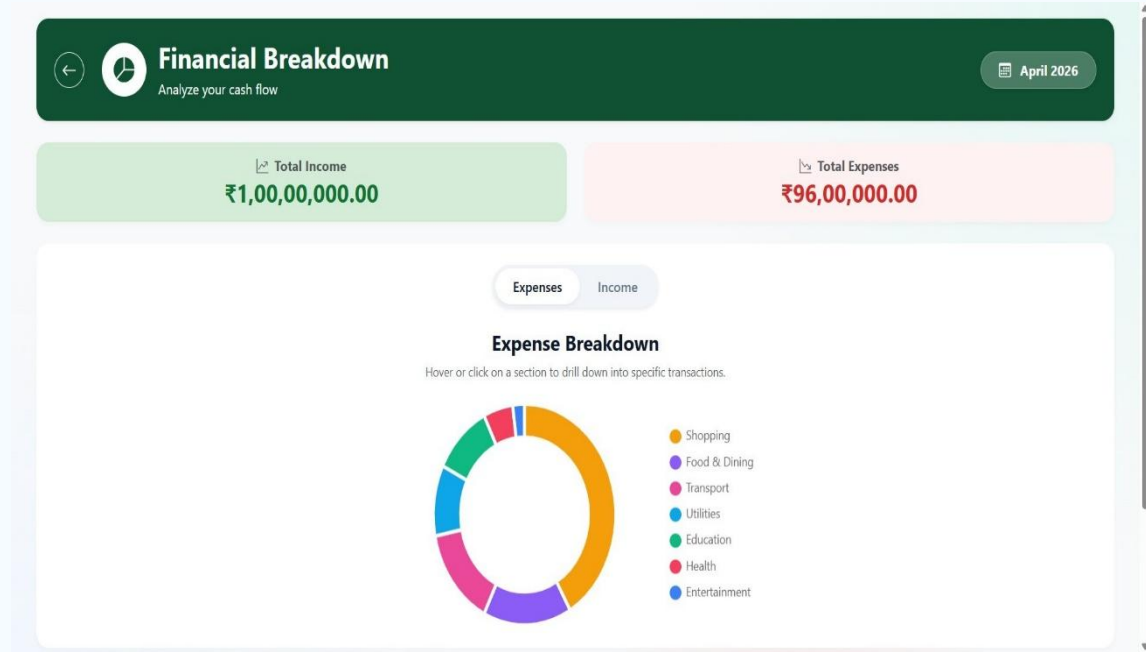

Current Status

“Our Budget Planner empowers users to track income, expenses, and savings seamlessly, delivering financial clarity and control through a secure, modern platform.”

“Our Budget Planner makes managing money simple and stress-free, helping people stay on top of their expenses and feel more confident about their financial future.”

Thank You
